I.T. Department breaks barriers by creating Android apps for Dysart stakeholders

DYSART SCHOOLS — The Information Technology Department of the Dysart Unified School District led by Chief Information Officer, John Andrews, has introduced four brand new, homegrown mobile applications. The main goal of the custom applications is to deliver accurate data in a timely manner to all Dysart stakeholders, which includes employees, students, and community members.

The Dysart News Widget, which is available to students and community members, displays Dysart news on an Android phone as soon as information is posted on the District website www.dysart.org. Having immediate access to information and current events at people's fingertips is another way Dysart continues to expand its communication process. The applications are an exciting breakthrough for Dysart's I.T. Department, which projects fifteen more applications to be created and made available by the end of the 2011-2012 school year.
