School district spending analysis—Fiscal year 2021

Dysart Unified School District

District demographic information

- **County:** Maricopa
- **Peer group:** Operational 1
- **Legislative district(s):** 13, 21, 22, and 29
- **Location:** Suburb
- **Number of schools:** 24
- **Graduation rate (2020):** 93%

- **Students attending:** 22,424
- **Size:** Very large
- **5-year change in students attending:** 7% decrease
- **Special education population:** 15%
- **English learner population:** 3%
- **Poverty rate (2020):** 12%

District’s spending by operational area

![Pie chart showing spending distribution]

- **Classroom spending, 73.2%**
  - Instruction, 57.8%
  - Student support, 10.3%
  - Instruction support, 5.1%

- **Nonclassroom spending, 26.8%**
  - Administration, 8.8%
  - Plant operations, 10.5%
  - Food service, 3.9%
  - Transportation, 3.6%

For definitions of what is included in operational spending and each of the operational areas, see the “Spending areas” section on the Glossary page.

Every year, school districts must decide where to allocate their resources. This pie chart shows how Dysart Unified School District spent its funding by operational area, including the percentage it spent in the classroom and specifically on instruction.

We categorize districts with certain similar qualities into peer groups in order to help create meaningful comparisons across districts. Dysart Unified School District’s peer group had an average instructional spending percentage of 57.8%. This number can help provide context for Dysart Unified School District’s own instructional spending percentage.

We have monitored instructional spending since fiscal year 2001. Below are highlights from Dysart Unified School District’s instructional spending trend showing the most recent year-to-year change and the years it spent its highest and lowest percentages on instruction.

**Instructional spending percentage highlights (2001-2021)**

Reviewing these instructional spending percentage highlights can provide insight into short-term (year-to-year comparison) and long-term (highest and lowest comparison) trends of a district’s allocation of monies to instruction. Depending on how much a district spends in total, even small changes in a district’s percentage spent on instruction can equate to large changes in the actual dollars the district spent.

- **Current fiscal year (2021):** 57.8%
- **Prior fiscal year (2020):** 57.7%
- **Highest fiscal year (2006):** 59.4%
- **Lowest fiscal year (2001):** 50.8%

Why monitor school district spending?

Most school district funding is based on the number of students attending, and districts can choose how to spend most funding, so every decision a school district makes to spend on one operational area directly impacts its ability to spend on another.

The bar chart below, "Percentage point change in spending by area," illustrates how Dysart Unified School District’s spending by area has changed from the prior year and 5 years ago.

To put the spending percentages in context, it also can be helpful to review a district’s per pupil spending in dollars. For example, 2 districts may spend the same percentage of their resources on instruction, but on a per student basis, 1 district may spend hundreds or even thousands of dollars more than the other.

Percentage point change in spending by area

Compare State-wide FY 2021 spending to: District's FY 2016 spending (5-year trend)

Compare District's FY 2021 spending to: District's FY 2020 spending (1-year trend)
Change in classroom spending, 4.1%
- Instruction, 2.0%
- Student support, 1.4%
- Instruction support, 0.7%
Change in nonclassroom spending, -4.1%
- Administration, -0.7%
- Plant operations, -0.8%
- Food service, -1.1%
- Transportation, -1.5%

Change in classroom spending, 0.9%
- Instruction, 0.1%
- Student support, 0.3%
- Instruction support, 0.5%
Change in nonclassroom spending, -0.9%
- Administration, 0.0%
- Plant operations, 0.0%
- Food service, -0.5%
- Transportation, -0.5%

Operational efficiency measures

Performance measures, such as those shown below, can be used in addition to instructional spending percentage to assess a district’s operational efficiency. We have classified the District’s spending relative to its peer districts’ average as very low, low, comparable, high, very high, or N/A (not applicable). High or very high spending when compared to peer averages may signify an opportunity for improved efficiency in that area.

N/A is presented for the nonspending related measures, for districts that did not operate a program in that area (i.e., food service or transportation), and for very small districts. For more information, see the “Operational efficiency measure calculations” section on the [Glossary page](#).
Transportation performance measures are compared using different peer groups because we have found there are other factors, such as the number of miles a district averages for each rider, that impact transportation spending. In fiscal year 2021, we did not develop transportation peer groups for comparison due to the impact of the COVID-19 pandemic on district operations. For more information, see the “Summary of significant changes” section on the Resources page. However, we did still calculate the measures for each individual district. An N/A for a district’s individual measure may mean they do not operate a transportation program or did not operate one for the year, or they did not transport any riders on their routes in fiscal year 2021.

### Why monitor average teacher salary?

Teacher salaries are one of a school district’s most significant costs and have been a topic of high interest in recent years in Arizona. Beginning in fiscal year 2018, the State budget included additional money intended to increase the State’s average teacher salary by 20 percent between fiscal years 2017 and 2021. The trend lines below show how Dysart Unified School District’s average teacher salary changed during this time, as well as how it compared to the State average.

We have also included a table that displays other student- and teacher-related measures that may provide additional context for how Dysart Unified School District’s average teacher salary may have changed. For instance, changes in a district’s teacher population can impact the district’s average teacher salary.
